

## **FARO to showcase scan-to-BIM solution at GEO|Design+BIM 2018**

**Amsterdam:** GEO| Design+BIM, a platform that highlights the use of geospatial data analytics and Building Information Modelling (BIM) in asset spatial design, construction, and operation and maintenance, is pleased to announce [FARO](#) as a Silver Sponsor. The event is scheduled to take place from 1-2 November 2018, in Amsterdam.

With the theme “Enabling Tomorrow’s Connected Infrastructure”, GEO| Design+BIM 2018 will delve further into the integration of geospatial technology and BIM, and other associated industry trends including big data analytics, IoT, drones, VR, robotics, cloud worksharing, city information modeling, digital twin, etc.

FARO’s 3D measurement and imaging solutions have been adopted globally by architectural practices, construction engineering companies and building contractors for 3D modeling and as-built documentation. The solutions allow AEC professionals to quickly and accurately extract desired 2D and 3D deliverables in construction projects.

“We’ve evolved and reshaped ourselves over the past few years to focus on providing complete solutions to construction industry professionals along the building life cycle,” stated Andreas Gerster, Vice President – Global Construction BIM. “With our Traceable Construction solutions, we create a consistently structured set of verified data, which will be a big boost for construction accuracy. This will result in less time and money wasted at the construction site achieving not only a better construction quality but also a higher Return on Investment.”

“FARO has been continuously innovating and setting new standards to laser scanning technology. We’re excited to bring this trend into GEO|Design+BIM agenda this year. On top of serving as a collaborative platform, GEO|Design+BIM will be the avenue to showcase the latest industry trends, tools and technologies available to users,” adds Anamika Das, Vice President, Outreach and Business Development at Geospatial Media and Communications, the conference organizer.

### **About GEO|Design+BIM**

GEO|Design+BIM is an exclusive event in Europe, highlighting and initiating discussions related to the use of geospatial data analytics and BIM in asset spatial design, construction, operation and maintenance. The event is a combination of two innovative platforms: GeoDesign Summit Europe and GeoBIM Europe, which were organized separately since 2013. Understanding the relevance and importance of bringing the geospatial analytics, spatial planning, architecture, engineering, construction and operation/maintenance professionals together on one platform, a combined effort was initiated in 2017, giving birth to this exciting integrated event.
