

Royal HaskoningDHV to organize a program on Open BIM successes at GEO | Design+BIM 2018

Amsterdam: GEO | Design+BIM, a platform that highlights the use of geospatial data analytics and Building Information Modelling (BIM) in asset spatial design, construction, and operation and maintenance, is pleased to announce that [Royal HaskoningDHV](#) will organize a program on Open BIM successes at the event, scheduled to take place from 1-2 November 2018, in Amsterdam.

Jugal Makwana, Global Director Digital Engineering at Royal HaskoningDHV: "Open BIM standards are vital for efficient collaboration with clients, supply chains and wider contributors geared towards maintenance and development of the built environment. Using open, sharable asset information in the creation of civil infrastructure and buildings worldwide will help our industry to become more efficient and will lead to improvements in costs, value and environmental performance."

Royal HaskoningDHV has recently become International Member of buildingSMART International to lead the development of global openBIM standards. As a content partner at GEO | Design+BIM, Royal HaskoningDHV will organize a session on Open BIM to discuss the importance of open, sharable asset information in the design and construction of civil infrastructure and buildings. Several industry representatives will be sharing how Open BIM has proven to be key to their business and successful collaboration. The session is scheduled on 2 November.

"We applaud Royal HaskoningDHV for taking the leadership role in promoting the importance of open standards in construction industry. This partnership adds a lot of value to GEO | Design+BIM as we strive to create a content-rich and user-focused conference for our audience" adds Anamika Das, Vice President, Outreach and Business Development at Geospatial Media and Communications, the conference organizer.

About Royal HaskoningDHV

Royal HaskoningDHV is an independent company delivering engineering, consultancy and project management services since 1881. We have almost 6,000 professionals operating from across the world who are eager to innovate and co-create with clients and partners to have a positive impact on people, our living environment and the economy. More and more we connect the digital with the physical world. Together with clients and partners, we use data and algorithms to solve new challenges and prevent problems. We help our clients in their digital transformation and we support their business with better and faster execution of their ambitions. Enhancing society together! About GEO | Design+BIM

GEO | Design+BIM is an exclusive event in Europe, highlighting and initiating discussions related to the use of geospatial data analytics and BIM in asset spatial design, construction, operation and maintenance. The event is a combination of two innovative platforms: GeoDesign Summit Europe and GeoBIM Europe, which were organized separately since 2013. Understanding the relevance and importance of bringing the geospatial analytics, spatial planning, architecture, engineering, construction and operation/maintenance professionals together on one platform, a combined effort was initiated in 2017, giving birth to this exciting integrated event. Visit www.geo-bim.org/europe to learn more.
